Report- 78 Installation Instructions

- To read the report, you will need to have installed the Adobe Acrobat Reader[1]. This can be done quite simply. If your operating system is Windows 3.1 or below, then run the program Ar16e30.exe which is in the folder <Acrobat\16bit> . If you are running Windows 95, NT etc, run the program Ar32e30.exe which is located in the folder <Acrobat\32bit>. You will need to agree to the conditions of the Adobe software agreement.

- To install the report and the processor on your hard disk, run the install78.exe program which is located on the CD-ROM. You will be given three options on how to perform the installation - to save space we strongly recommend that you choose the first option < Basic Network or CD ROM installation >.

- The program will take you through the necessary steps.

- If you choose the basic installation, you will need to have the CD-ROM in your computer before you can run the spectrum processor.

- If you choose to use the full installation, please note that it will take a long time to copy all the files - 15 minutes is not unusual.

- For instructions on running the processor, see the file specpro.doc/pdf /wri.
